Bactimain DSF is antibacterial hand soap, recommended for hygienic washing and surgical disinfection. Bactimain DSF is suitable for use by people in aseptic environment.

BACTIMAIN GHA

Bactimain GHA is a hydroalcoholic hand disinfectant gel. Recommended for use against nosocomial infections, and for use by people who work in aseptic environment.

ASEPT

Asept is a blend of cosmetic grade detergents specifically formulated for the cleansing of hands, gently and efficiently. Effectively reduces microflora of the skin with the aid of proven antimicrobial Triclosan.

offers a comprehensive solution in the healthcare system all part of the infection control program which includes: hard surface cleaners and disinfectants, bathroom cleansers and scrubs, antimicrobial hand soaps and no rinse hand gel sanitizers. At Sanipro disinfecting products hold a Drug Identification Number (DIN) recognized worldwide.

New generation antibacterial materials

As part of its ongoing commitment to researching and developing new integrated cleaning solutions, IPC Euromop has designed a sanitizing system able to reduce situations representing a potential risk of infection due to the proliferation of pathogenic microorganisms in areas where people may be suffering from immune system deficit. IPC products for the health sector are genuinely innovative, as they are produced with the most advanced antibacterial treatments, able to drastically reduce the bacterial load potentially present on mops, cloths and equipment and thus limiting the spread of microorganisms in the environment. IPC has developed the HDS (Healthcare Disinfection Suite) system, a suite of innovative antibacterial products.

It includes:

- 1 Trolleys in antibacterial material with removable drawers and lid.
- 2 HDS frame, antibacterial polypropylene, No Touch system.
- 3 Differentiated antibacterial microfiber mops and cloths for the various areas to be sanitized.
- 4 Swing top or foot-operated lid waste containers made of antibacterial material.
